# Perfect Saddle Stool

# ...the Art of Sitting

For years, users all over the world have enjoyed the many ergonomic benefits of sitting 'Equestrian-Style' on saddle stools. The Perfect Saddle Stool facilitates proper posture and is suited for professionals wishing to alleviate fatigue and potential injury accompanying long procedures.

All our products are equipped with a tilting mechanism, vertically adjustable gas spring and a space saving base. Custom colours and fabrics are also available. In addition to the high quality craftsmanship of the Support Design brand, a 5-year warranty on parts and labour is offered with our products.

A common challenge with sitting in a conventional work-chair is that the lumbar discs are being stressed and over time damaged, because the shape of the spine is not maintained. Sitting equestrian-style with legs apart, leaning at approximately a 130 degree angle, recreates the S-shape alignment of the spine, minimizes risk of muscular skeletal disorders and improves circulation to the lower extremities.

## Perfect Saddle Stool product line

### Perfect Classic

Our original model encourages a healthy posture by creating an open angle between the spine and thighs thus helping maintaining natural spinal curves.

### Perfect Advanced

As Perfect Saddle Classic but featuring a V-shaped cut-out at the front end of the saddle seat, and grooved center, minimizing uncomfortable pressure. The Perfect Advanced has been specifically developed to support the male anatomy.

### Perfect Lite

Developed from our Perfect Classic, the Perfect Lite features a smaller seat pan allowing a seating position with a more narrow leg stance. This model is particularly well suited for users of smaller stature and women.

## Information:
